Discussion ideas for informal teaching in the SNICU M4 elective

1. Management of sedation for an intubated patient
2. Management of intracranial hypertension
3. Diagnosis and management of stroke
4. Management of subarachnoid hemorrhage
5. Hemodynamic monitoring and evaluation of shock
6. Therapeutic options for a patient with shock
7. Diagnosis and management of acute myocardial infarction
8. Evaluation of respiratory failure
9. Non-ventilatory management of respiratory failure
10. Ventilatory management of respiratory failure
11. Criteria for weaning and extubation
12. Evaluation of the cause of acute kidney injury
13. Management of acute kidney injury
14. Management of hyper/hypo-natremia, hypo/hyper-kalemia
15. Recognition and management of acid-base imbalance
16. Nutrition strategies and options in critically ill patients
17. Evaluating fever in the ICU
18. Management of severe sepsis/septic shock
19. Management of anemia in the ICU
20. DVT prophylaxis in the ICU
21. Heparin-induced thrombocytopenia: diagnosis and management
22. Management of the bleeding post-operative patient
23. Glucose management in the ICU
24. Adrenal insufficiency in the ICU
25. Prevention of nosocomial infections in the ICU
26. Management of compassionate extubation
